ZRZ DEALER ACQUISITION CRM

Purpose

The purpose of this CRM is to give us one simple system for managing dealership prospecting and measuring exactly what produces new business.

The system should answer four basic questions at any time:

1. What dealerships are we targeting?
2. What have we done with each dealership?
3. What needs to happen next?
4. Which activities are actually producing meetings, proposals, and revenue?

The CRM should live directly inside the existing ZRZ dashboard and should be designed so additional automation/AI can be added later.

---

1. DEALERSHIP DATABASE

Every dealership should have its own permanent record.

Basic Information

- Dealership ID
- Dealership name
- Dealer group / parent company
- Franchise/brand
- Website
- Address
- City
- State
- ZIP
- Main phone number
- Territory/market
- Assigned salesperson/user
- Date dealership was added
- Lead source

Lead Source Options

- Manual research
- Cold email
- Cold call
- Walk-in
- Referral
- Existing client introduction
- Dealer group relationship
- Website/inbound
- Other

---

2. DEALERSHIP CONTACTS

A dealership must be able to have multiple contacts.

For example:

- Owner
- Dealer Principal
- General Manager
- General Sales Manager
- Used Car Manager
- Fixed Operations Director
- Service Manager
- Internet/BDC Manager
- Controller/CFO
- Other

For every contact store:

- First name
- Last name
- Job title
- Email
- Phone
- Mobile number
- Preferred contact method
- Active/inactive
- Date contact was added
- Date information was last verified

- Notes

IMPORTANT:

If a manager leaves the dealership, do not delete or overwrite that person's history. Mark them inactive and add the new manager.

---

3. DEALERSHIP RESEARCH / INVENTORY AUDIT

This is extremely important because a major sales strategy will be researching dealership websites before contacting them.

For every dealership audit, record:

- Audit date
- Total new vehicles
- Total used vehicles
- Used vehicles missing photos
- New vehicles missing photos
- Missing-photo percentage
- Vehicles with incomplete/poor photo sets if available
- Missing merchandising if identified
- Other website/inventory problems
- Notes
- URLs/examples if applicable

IMPORTANT:

Every audit should be saved historically.

If I audit a dealership today and again 30 days later, I want both audits preserved rather than the new numbers replacing the old ones.

Eventually this information may be collected automatically, so structure it accordingly.

---

4. SALES PIPELINE

Every dealership should have a clear status.

Suggested pipeline:

1. Research Needed
2. Researched
3. Ready to Contact
4. Outreach Active
5. Replied
6. Conversation
7. Meeting Scheduled
8. Meeting Completed
9. Opportunity
10. Proposal Sent
11. Negotiating
12. Won
13. Lost
14. Nurture / Follow Up Later

Every time a dealership changes stages, automatically save:

- Previous stage
- New stage
- Date
- Time
- User

This allows us to calculate how long prospects remain in each stage and how long deals take to close.

---

5. ACTIVITY HISTORY

Every interaction with a dealership should appear chronologically on the dealership's record.

Activity types:

- Research completed
- Email sent
- Email reply
- Positive reply
- Negative reply
- Phone call

- Connected phone call
- Voicemail
- Text message
- Walk-in visit
- Conversation
- Meeting scheduled
- Meeting completed
- Proposal sent
- Follow-up
- Referral/introduction
- Contract won
- Contract lost
- Note

Every activity should contain:

- Date/time
- Dealership
- Contact
- Activity type
- User
- Notes
- Result/outcome
- Next action
- Next-action date

I want to be able to open one dealership and immediately see the entire history of our relationship.

---

6. EMAIL TRACKING

Email is going to be one of the main acquisition channels.

Where technically possible, emails should automatically attach to the appropriate dealership/contact.

Track:

- Email sent
- Date/time
- Recipient
- Dealership

- Contact
- Subject line
- Email template/version used
- Campaign if applicable
- First email vs follow-up
- Follow-up number
- Delivered
- Bounced
- Reported opened
- Reported clicked
- Replied
- Positive/negative response
- Meeting generated
- Opportunity generated

Open/click information is useful but should NOT be considered the primary success metric.

The important metrics are:

Replies → Conversations → Meetings → Proposals → Won Accounts

---

7. EMAIL TEMPLATE TRACKING

This is important because I want to experiment.

Every outbound email should be associated with a template/version where applicable.

Example:

- Missing Photos V1
- Missing Photos V2
- Recon Introduction V1
- Merchandising V1
- GM Introduction V1

Track performance for each template:

- Emails sent
- Delivery rate
- Reply rate
- Positive reply rate
- Meetings generated

- Opportunities generated
- Contracts won
- Revenue won

Also track subject-line versions separately if possible.

I want to eventually know:

Which message actually produces dealerships?

---

8. FOLLOW-UP SYSTEM

This is one of the most important requirements.

No active prospect should disappear because I forgot about them.

Every active dealership should have either:

- Next action + next-action date
- Won status
- Lost status
- Nurture/revisit date

Dashboard should show:

Today

- Follow-ups due today
- Meetings today
- Calls due
- Dealers to research
- Dealers to contact

Overdue

- Overdue follow-ups
- Prospects with no recent activity
- Opportunities that have gone stale

I should be able to click an item and immediately open the dealership.

---

9. LOST DEAL TRACKING

When an opportunity is lost, require a reason.

Standard reasons:

- Happy with current vendor
- Doing it in-house
- Price
- No current need
- Bad timing
- Corporate/group decision
- Existing vendor relationship
- Competitor
- No response
- Service-area issue
- Quality concern
- Other

Allow additional notes.

This is important because after hundreds of dealerships I want to see exactly why we are losing opportunities.

---

10. WON DEAL TRACKING

When a dealership becomes a customer, capture:

- Date won
- Services sold
- Contract structure
- Estimated monthly revenue
- Estimated annual revenue
- Estimated monthly profit if available
- Estimated annual profit if available
- Acquisition source
- First-touch source
- Campaign/template responsible
- Number of emails/touches before close
- Days from first contact to close

This lets us measure the actual financial return from prospecting.

---

11. TIME / EFFORT TRACKING

I want to know where my time is going.

Make it easy to record time spent on:

- Dealer research
- Website/inventory audits
- Email prospecting
- Phone prospecting
- Field/walk-in prospecting
- Driving
- Meetings
- Follow-ups
- Proposals/admin

This does not need to become complicated.

A simple timer or quick time-entry system is fine.

The goal is eventually being able to calculate things such as:

Hours spent → meetings generated → dealerships acquired → annual revenue generated

---

12. MAIN DASHBOARD

Keep the dashboard visual and simple.

I want selectable date ranges:

- Today
- This week
- This month
- This quarter
- Custom dates

Show:

Activity

- Dealerships researched
- Dealerships contacted
- Emails sent
- Calls
- Walk-ins
- Follow-ups
- Conversations
- Meetings

Funnel

Researched → Contacted → Replied → Conversation → Meeting → Proposal → Won

Show both:

- Number at each stage
- Conversion percentage

Results

- Meetings generated
- Proposals generated
- Accounts won
- Accounts lost
- Monthly revenue won
- Annualized revenue won
- Pipeline value

Efficiency

- Hours prospecting
- Meetings per 100 dealerships contacted
- Accounts won per 100 dealerships contacted
- Hours per meeting
- Hours per account acquired
- Annualized revenue won per prospecting hour

---

13. PERFORMANCE ANALYTICS

This is where the CRM becomes extremely valuable over time.

I want to eventually compare performance by:

- Email template
- Subject line
- Campaign
- Lead source
- Missing-photo percentage
- Dealership brand
- Dealer group
- State
- City/market
- Dealership size
- Contact/job title
- Day of week
- Email send time
- Number of follow-ups
- Email vs call vs walk-in
- Combination of email + call + visit
- Manual personalized outreach vs automated outreach

Example questions the system should eventually answer:

"Which email produces the most meetings?"

"Do dealerships with more than 15% missing photos respond more frequently?"

"Do GMs or used-car managers respond more frequently?"

"How many touches does it normally take before we get a meeting?"

"Which markets have the highest close rate?"

"Are walk-ins producing more revenue per hour than email prospecting?"

"Which activity generated the most annual revenue?"

---

14. SEARCH AND FILTERING

The database needs powerful filtering.

Examples:

"Show all Toyota dealerships in Connecticut that have been researched but not contacted."

"Show dealerships with more than 10% missing photos."

"Show dealerships emailed twice with no response."

"Show dealerships I've emailed but never visited."

"Show GMs who replied positively but never scheduled a meeting."

"Show prospects with no activity in the last 30 days."

"Show lost prospects marked 'bad timing' that should now be contacted again."

---

15. DATA QUALITY

Please build safeguards for:

- Duplicate dealerships
- Duplicate contacts
- Duplicate emails
- Standardized dropdown selections
- Required fields where appropriate
- Automatic timestamps
- Historical activity records
- User/action history
- CSV import/export
- Backups

Avoid unnecessary manual typing wherever information can be captured automatically.

---

16. FUTURE AUTOMATION / AI

We do NOT need to build all of this now.

However, please structure the CRM so these capabilities can be added later without rebuilding everything.

Eventually I want the possibility of automating:

1. Finding dealerships
2. Scraping dealership websites/inventory
3. Counting inventory
4. Calculating missing-photo percentages
5. Finding dealership managers/contact information
6. Creating dealership research summaries
7. Generating personalized email drafts
8. Putting emails into an approval queue
9. Sending approved outreach
10. Scheduling follow-ups
11. Reading/classifying replies
12. Identifying high-priority prospects
13. Suggesting the next action
14. Analyzing which strategies produce the most contracts
15. Feeding all activity/results automatically back into the CRM

The CRM should become the clean data foundation underneath these future systems.

---

17. MOST IMPORTANT DESIGN PRINCIPLE

I do NOT want an unnecessarily complicated CRM.

The goal is:

Simple to use every day + extremely good data in the background.

If entering information becomes annoying, I won't use it consistently.

Anything the system can automatically record—timestamps, emails, activity history, stage changes, calculations, conversion rates, etc.—should be automated.

The CRM should make it very easy for me to answer:

What did I do?

How much time did I spend?

What happened as a result?

What do I need to do next?

What activities are actually producing dealership contracts and revenue?

That is the entire purpose of the system.
